## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-14, drawn to regulating traffic flows through a network node during congestion based on flow type, classified in class 370, subclass 235.
  - II. Claims 15-18, drawn to monitoring and collecting flow rate information at a network node over periods of time and utilizing that data to regulate traffic during congestion, classified in class 370, subclass 232.
  - III. Claims 19-21, drawn to classifying traffic flows according to protocol's behavior and blocking packets based on predetermined class, classified in class 370, subclass 395.43.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions in group I and II are distinct from one another because group I and II are both method of regulating traffic at a node. However, group I regulates traffic based on flow type where group II collects flow rate information over time and generate flow rate base line to compare with incoming traffic. Group III is distinct in that it discloses traffic classification.
3. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are

Art Unit: 2667

shown to be separately usable. In the instant case, invention II has separate utility such as generating flow rate baseline based on traffic flow rate over period of time. See MPEP § 806.05(d).

4. Inventions I and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention III has separate utility such as classifying traffic flows according to protocol's behavior. See MPEP § 806.05(d).

5. Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention III has separate utility such as classifying traffic flows according to protocol's behavior. See MPEP § 806.05(d).

6. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
